

THE OVERSEA HUB

The Power to Know You're Ready to Go

Innovative, Self-Powered Boat Monitoring for Continuous Protection

The Skyhawk Oversea Hub is the heart of Skyhawk's self-powered, Internet of Things (IoT) solution for monitoring the safety, readiness, and security of one or more vessels.

Powerful standalone tracking device

Alone, this AA-battery powered device provides location-on-demand tracking and can detect even small compass bearing fluctuations to immediately alert owners to potential theft, unauthorized movement, or a dragging anchor.

Cloud gateway for your Oversea sensors

The Hub also easily integrates with Oversea's array of powerful wireless RF sensors to monitor a wide range of critical safety, security and readiness factors including battery and shore power status, bilge pump activity, high water, motion detection, door entry and more.

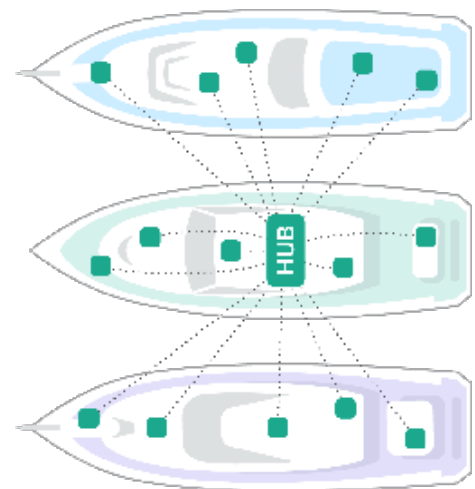

The battery-powered difference

Because the Hub and all sensors are battery powered, Skyhawk Oversea delivers year-round monitoring with no drain on the boat's batteries. It's perfect for boats of all types and sizes, where they're stored in a marina, on a trailer, on a home dock or boat lift, or even on a mooring.

With boats spending most of their time in storage, Skyhawk Oversea provides owners with continuous peace of mind without wearing down the very batteries you need to enjoy your boat when the opportunity comes.

There are no wiring or connections to make, so installing the Skyhawk Oversea Hub is simple – just drop it in and go. And with retail pricing a fraction of other monitoring systems currently on the market, there's simply no good reason not to leave worry in your wake.

- Year-round monitoring
- Outdoor and indoor location on demand
- Half the cost of similar systems
- Doesn't drain your boat battery
- Monitors sensors on your boat and others nearby
- Made in the USA

The Oversea hub can monitor sensors that are hundreds of feet away, allowing you to monitor multiple boats or other assets – yours or your dockmates – using a single Hub.

Boat Monitoring Made Easy.

Safety. Security. Readiness.

If you're a boater who thinks that state-of-the-art boat monitoring is too expensive, too hard to install or too complicated, meet Skyhawk Oversea. The Skyhawk Oversea Hub is ingenious in its simplicity. It's easy to afford, easy to install, and easy to use on all types of boats. Here are just some of the benefits boaters will enjoy...

POWER AND VERSATILITY

- Monitors an unlimited number of sensors on your boat and other boats nearby
- Provides boat location on demand whether it's on the water or in a storage building
- Leverages the most advanced IoT cellular technology from Verizon®

HIGH-RELIABILITY, YEAR-ROUND

- Fully self-powered – never drains your boat battery
- Monitors for years on AA batteries – 5-10 years as a standalone tracking device, 1-3 years when also monitoring sensors
- Designed for durability – IP65/67 protection for harsh marine environments

INTUITIVE EASE OF USE

- The Hub installs in minutes – no wiring or power required
- Add sensors without pairing or passwords – scan and go
- Stay boat-aware at all times through the Oversea mobile app as well as email and SMS

THE BEST VALUE

- Half the cost of similar systems
- US-made quality – designed and manufactured at our New Hampshire HQ
- Built on Skyhawk's proven PRIoT platform, which powers remote monitoring at thousands of locations worldwide

Every boater deserves year-round peace of mind, security, and confidence when it's time to hit the water. Contact Skyhawk Oversea to learn more about this powerful tool for boaters, marinas, and storage facility operators.
