

Skyhawk Trapmate™ Electronic Remote Trap Monitoring

Control rodents and wildlife more effectively with less time, effort and cost

Skyhawk Trapmate is a full line of single- and multi-trap electronic remote monitoring (ERM) solutions designed for forward-thinking pest control and wildlife control operators.

Designed to work with your existing traps and stations – and deployable virtually anywhere – Trapmate ERM systems will help you grow your business faster, service your customers better, and transform the way you work.

Monitor all your traps from your phone or desktop

Trapmate eliminates the need to check every trap every trip. Whether you're monitoring one trap or a thousand, Trapmate provides real-time alerts on each trap where a capture is detected. You'll be able to take immediate action when needed and avoid unnecessary trips when there's no animal activity.

Grow your business faster with Trapmate

Trapmate ERM solutions multiply the impact of your team and enable you to invest your time and resources into delivering the best customer service and achieving the best business results.

You'll open up new revenue streams and service models, win business over your old-school competitors, and you can even expand your geographic range, since you'll be able to cut down on unnecessary travel. With Trapmate, you'll have multiple paths to higher revenue and profit that will increase the value of your business.

Deliver better results for your customers

Expending effort to perform daily trap checks takes away time from more valuable pursuits – like diagnosing additional issues your customers may have. Using Trapmate frees up your time, opening new opportunities to expand and improve the services you provide and develop stronger relationships with your customers.

Trapmate eliminates unnecessary work so you can focus your time and energy where they deliver the best results. What's more, you'll be able to place traps in hard-to-reach locations that would have been unthinkable before, providing your customers with better coverage than ever.

A better way to work

Pest control and wildlife control businesses are critical to our nation's well-being. Yet it's a demanding profession that requires a lot from those in it.

Trapmate gives you a better way to work. Using Trapmate to eliminate empty trap checking reduces the physical wear and tear on your team, and does away with unnecessary travel. With Trapmate, the arts of pest control and wildlife control are more interesting and fulfilling, since you can focus more on the strategy instead of just on the tactics. And with increased customer interaction, you'll enjoy a better workplace and a more satisfying career.

Skyhawk Trapmate Products

All Trapmate components run on batteries for years, and require no external power, WiFi or other internet connections

Trapmate Multi-Trap Solutions

For use in residential, commercial and municipal settings

Trapmate Hub

The network controller for Trapmate multi-trap deployments, the Trapmate Hub collects alerts from sensors located as far away as 2,500 feet line-of-sight, and sends them to the Trapmate apps via a cellular connection. Unlike all other ERM gateways and hubs, Trapmate Hubs run on batteries and require no external power connections, so you can place them in the locations best for sensor communications, and well out of the way of foot or forklift traffic.

Trapmate Vibration/Magnet Sensor

The Trapmate Vibration/Magnet Sensor uses an adjustable accelerometer to detect vibrations from captured animals or trap movements, and a reed (magnet) switch to physically detect the movements of a trap or trap door. Once an event is detected, an alert is immediately sent to the nearest Trapmate Hub. Unlike other ERM sensors, Trapmate sensors use replaceable batteries, so you don't have to buy new sensors when the batteries run out.

Trapmate Harborage

Trapmate Harborage is a family of baitless trap stations – available in rat and mouse sizes – that are designed to work seamlessly with Trapmate sensors and the snap trap of your choice.

Trapmate Single-Trap Solutions

For use in wildlife and nuisance species trapping

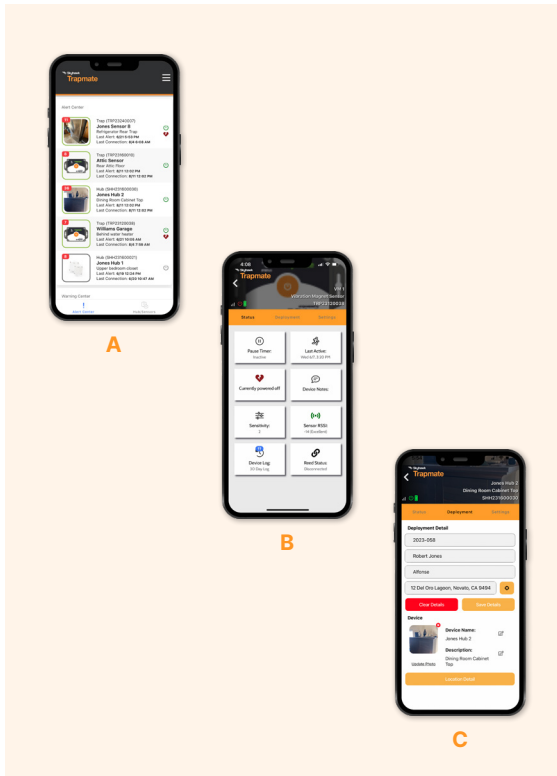

Trapmate Kiwi

The standard in single-trap electronic remote monitoring, the Trapmate Kiwi combines a vibration/magnet sensor and cellular hardware into a single unit. You can track trap activity from any location in the US where there's even a weak cellular connection. A superior alternative to video cameras, Kiwi devices run for more than a year on a set of replaceable batteries and offer far more reliability at a lower cost than video monitoring solutions.

Trapmate Software Applications

Apps to manage all of your Trapmate-enabled traps

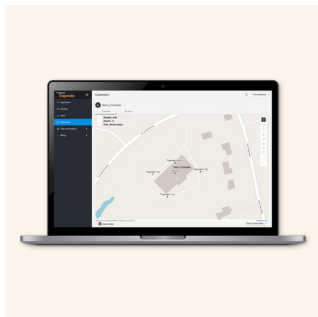

Skyhawk CE App

Available on Apple and Android mobile phones, the Skyhawk CE app is the control center for all of your Trapmate Hubs, Sensors and Kiwis. Use the Trapmate app to set up your devices, tag them geographically, assign them to a customer and customer site, and track activity. You'll get real-time trap alerts on the app which can also be sent via SMS or e-mail.

A | The **Alert Center** shows you the status of all your Trapmate devices.

B | The **Device Detail** screens let you check each device and control its settings.

C | The **Device Deployment** screens let you assign devices to customers and geo-tag and photograph placement locations.

Trapmate Enterprise Portal and App

The Trapmate Enterprise desktop portal and mobile application add on to the capabilities of the Skyhawk CE app. They provide augmented abilities to manage your Trapmate installations among your teams and customers, for both operational and customer billing purposes. The desktop portal delivers substantial reporting capabilities that can reduce the costs of auditing and other administrative overhead.

Trapmate Accessories

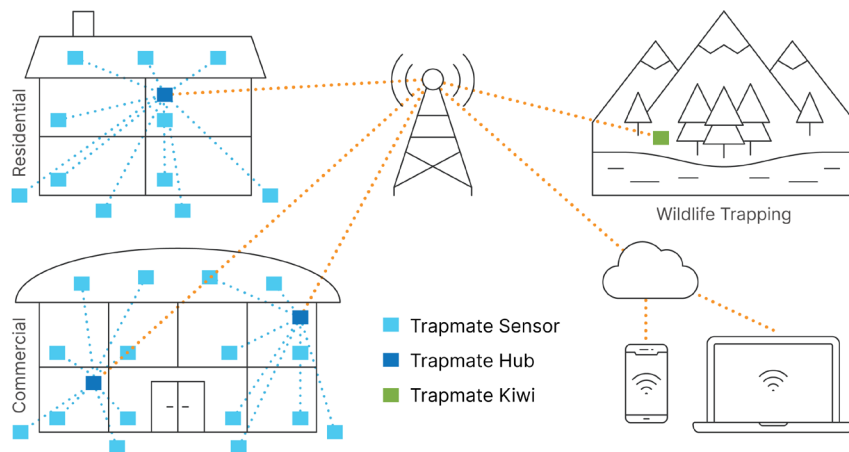

Add-ons for easier installation and increased environmental protection

Trapmate provides a number of accessories to make installing Trapmate devices on your existing traps and stations easy and fast, and to protect your Trapmate devices. **Trapmate Adapters** are inserts designed to drop into the most popular stations. **Trapmate Connectors** make it even easier to connect to snap traps. And **Trapmate Sleeves** add further protection from shock and extreme weather.

Note: Trapmate remote monitoring services are only available in the United States at this time.

Monitor all your traps from your phone or desktop

Whether you're managing traps at residences, commercial buildings or in the wild, you and your team can use the Trapmate mobile and desktop apps to monitor all of them from a single screen.

Your best ERM solution for rodent and wildlife control

COMPATIBLE WITH THE EQUIPMENT YOU ALREADY USE – Trapmate devices connect to almost all of your existing traps and stations.

EASIER TO DEPLOY – Install and set up Trapmate sensors and hubs in less than a minute each. No pairing or passwords required.

MORE RELIABLE – Trapmate devices are battery-powered, so they'll work anywhere at any time. And since you can place your gateways anywhere, you'll get much more reliable data connections too.

LOWER UPFRONT AND LIFETIME INVESTMENT – Trapmate solutions do more and cost less than competitive ERM solutions. And they cost less to maintain, providing better value for years.

FLEXIBLE PURCHASE PLANS – Skyhawk offers multiple options for hardware purchases and software subscriptions, so you can find a plan that matches your business model.
